ABSTRACT

In the new normal education, educators are expected to maximize to use of technology in providing instructional support to the student making them more engaged in the learning process. The study employed a mixed method to determine the positive effects of utilizing a teacher-made google site in teaching English for Academic and Professional Purposes (EAPP) among selected Grade 11 students. Google Sites is a website-building platform tool for the teacher who wants to build an e-learning environment, and a one-stop hub for students to access modules, interactive worksheets, important resources, video lessons, and reminders. The results of descriptive statistics provided evidence of the effectiveness of the intervention in prompting students’ engagement, independent learning, convenience, time management, and submission of outputs. A Paired-Sample T-test was also conducted and it was found that there was a significant gain with a large effect size on the knowledge of the participants after the intervention was implemented. An interview questionnaire was also administered to explore the experiences of the participants towards intervention. Through thematic analysis, it was found that students have positive perceptions and good experience in using the teacher-made google as supported by the frequency of the themes derived from their textual responses. These findings imply that the utilization of Google Sites was an effective learning platform during this time of distance learning. It is recommended that schools will adopt and implement this platform with wider scope as it is proven to help students boost their engagement, and independent learning gives the opportunity to take time in understanding the lesson, and easy access to learning materials.

1. INTRODUCTION

1.1. Research Background

The global pandemic restricts the schools’ delivery of learning across the globe. The need to adapt and embrace the abrupt change in the teaching-learning process is commonly practiced. Department of Education released the policy guidelines for the new normal process of learning following the DepEd Order No. 018, s. 2020 entitled ‘Policy Guidelines for the Provision of the Basic Education Learning Continuity Plan’. It centered on different mechanisms and modes of delivery for learners to acquire basic education despite the pandemic. The most common learning delivery modalities used in public schools were Modular Distance Learning (MDL) and Online Distance Learning (ODL).

As we go about the process of teaching and learning using Modular Distance Learning (MDL) and Online Distance Learning (ODL), there are observed impacts on the way of acquisition of learning amongst the students. Ref. [1] mentioned that there are negative impacts of the global pandemic on learners; some are lack of socialization, lack of learning motivation, and lack of interaction and engagement. It has been observed that the grade 11 TVL-HE learners experienced a lack of engagement and learning of the subject of English for Academic and Professional Purposes. This was based on the low percentage of attendance during the distribution of modules and worksheets, low percentage of returned outputs, and low percentage of students’ attendance during the weekly online consultations.

Hence, the Maximum Utilization of Google Sites (MUGS) in teaching English for Academic and Professional Purposes could be defined as an effective intervention to aid this existing problem of students’ engagement and learning. This platform is free; learners can access it anytime, anywhere; no need for distribution and retrieval which can save time for both learners and teachers; and provides convenience as it is just a click, tick, and submit. It has been proved in the study of Ref [2] that the implementation of Google Sites as an e-Learning platform for teaching during this
time of the pandemic is effective, increasing students' ability to learn, and attracting students' attention. Moreover, it is also agreed [3] that utilizing Google Sites is a highly effective e-Learning tool and enhanced learners' overall educational experience.

1.2. Literature Review

Maximum Utilization of Google Sites (MUGS) in teaching English for Academic and Professional Purposes is an e-learning platform using Google Sites. It is a website-building platform tool for the teacher who wants to build an e-learning environment, and a one-stop hub for the student to access modules, interactive worksheets, important resources, video lessons, and academic reminders.

It has been proved in many studies that using the Google site as an e-learning tool is an effective education platform for teaching during this time of the pandemic. It increases students' ability to learn and attracts students' attention [2].

Furthermore, Ref. [3] stated that utilizing Google Sites is a highly effective e-Learning tool, as it is a way to engage, inspire learners, and enhanced learners' overall educational experience. He also added that using Google sites as an e-Learning platform allows educators to build a thriving online community of learners and support tools for collaborative experiences. This platform encourages learners to publish their work and create online portfolios, set up a support site to offer learners peer-to-peer assistance, keep learners up to date with announcement features, share documents and important resource links, learners stay on track with assignment reminders and calendars, and develop a collective online database where all learners can input information.

1.3. Research Objective

The objective of the research is to: evaluate the effectiveness of the intervention Maximum Utilization of Google Sites (MUGS) through students' perception of using this strategy in terms of student engagement, independent learning, convenience, time management, and submission of outputs; determine the significant difference before and after the implementation of the intervention, and perceive students' experience using Google Sites as a learning platform.

To determine the effectiveness of this intervention the research questions were formulated:
1. What is the evaluation of students on the effectiveness of the intervention in promoting the following?
   a. Student's engagement
   b. Independent Learning
   c. Convenience
   d. Time management
   e. Submission of outputs
2. Is there a significant difference between the scores of the students before and after the implementation of the intervention?
3. What are the experiences of students on using Google Site as a learning platform?

2. MATERIALS AND METHODS

To conduct this study, the researcher asked for permission, and a letter of approval from all the stockholders of Las Pinas City National Senior High School CAA Campus, the School Principal, and the Parent/Guardian. After following all guidelines and rules, the privacy of students who are also the participants through convenience sampling in the study was protected. They are not subject to any harm, but to respect their dignity. The instrument used causes no harm to the participants but protects their basic information and responses abiding by the Data Privacy Law Act of 2012 Sec. 2 Declaration of Policy. To obtain pertinent data for this study, an instrument was utilized, and the following steps followed:

PRETEST. Google forms link was sent to the learners before the lesson started. These electronic forms include the topics, lessons, tasks, and assessments from the Modules and Worksheets anchored from the MELC, together with the attachment of video discussions for each topic. https://forms.gle/dibdp1teH8Dtn6M18

INTERVENTION. A two-week-long intervention using the Maximum Utilization of Google Sites (MUGS). These platforms include the lessons taken from the modules and worksheets that aligned to MELC, videos discussing the topics, interactive worksheets, learning materials, and practice tests to practice the mastery of the lessons. After they understand the lessons deeply, they easily answered the tasks and assessments given. These electronic platforms are free, and they can access them anytime and anywhere they want. https://sites.google.com/deped.gov.ph/english-for-academic-and-profe/home

POST-TEST. After the given intervention the student was given a post-test to measure their learning if there will be a significant difference from the pre-test conducted two weeks ago. The same set of questions from the pre-test was administered. https://forms.gle/yfWc6id1BspMj4RA

SURVEY/INTERVIEW. The survey was conducted after the post-test. This survey was to collect data on how the Maximum Utilization of Google Sites (MUGS) affects student engagement, learning, time management, convenience, and impact on the submission of outputs. https://forms.gle/5VxC7M9KrRHz4ri9

INTERVIEW. The interview of the open-ended questions was conducted after the survey questionnaire. This interview was to collect data on the students’ experiences using the Maximum Utilization of Google Sites (MUGS). https://forms.gle/DJcqf1sCUKRu1dCP7

To answer the research questions, the collected data were used and interpreted by:

Descriptive Statistics to assess the effectiveness of the intervention in promoting student engagement; independent learning; convenience; time management; and submission of outputs by the use of the Likert scale [4]. Paired sample t-test to compare the pre-test and post-test mean scores of the students [5,6].

Shapiro-Wilk statistics to examine the assumption of normality on the gain scores [7]. Thematic analysis of the textual responses of students on the four open-ended questions to support the quantitative findings [8].
3. RESULT AND DISCUSSION

Descriptive statistics were used to assess the effectiveness of the intervention in promoting student engagement; independent learning; convenience; time management; and submission of outputs. An evaluation tool consisting of five criteria was used to quantify how are the indicators for each criterion evident in the learning experience of the students. The weighted mean for each indicator and the mean for each criterion were calculated. The mean scores were interpreted as follows: not evident (1.00 - 1.79); somewhat evident (1.80 - 2.59); moderately evident (2.60 – 3.39); evident (3.40 - 4.19); and highly evident (4.21 - 5.00).

Figure 1 presents the students’ evaluation of the effectiveness of the intervention in promoting student engagement; independent learning; convenience; time management; and submission of outputs. As shown in Table 1, all the five criteria were verbally interpreted as “evident.” This indicates that from the perspective of the students, utilization of Google Sites served as an effective learning platform as evidenced by the overall mean of each criterion.

Figure 1. Student Evaluation of the Effectiveness of the Intervention

Another objectives of this study is to determine if the knowledge of English for Academic and Professional Purposes (EAPP) of the students has improved after the intervention was implemented. The knowledge of English for Academic and Professional Purposes (EAPP) was measured using a teacher-made test 20-item test. The result of Pre-test and Post-test based on 20-item test can be seen in Table 2.

Table 2: Paired sample t-test was used to compare the pre-test and post-test mean scores of the students. Before conducting the analysis, Shapiro-Wilk statistics were computed to examine the assumption of normality on the gain scores. The result of the Shapiro-Wilk test showed that the assumption of normality was not violated, W (24) = 0.954, p = 0.306.

To support the quantitative findings, a thematic analysis was conducted on the textual responses of students to the four open-ended questions. Table 3 shows that most of the students experience ease in using Google Site as a learning platform because it is free for anyone with a Google account to access and use; it is a one-stop hub for students to access modules, interactive worksheets, important resources, video lessons, and reminders; and it is just a link to click away without even getting modules and worksheets at school. On the other hand, four (4) students had concerns about connectivity problems. This concern is inevitable or at least using google sites requires fewer internet data since it is just a link than conducting an online class or installing an e-learning platform that consumes more data and storage from their phone. Limited Features were also viewed as a disadvantage of using Google Site. Six (6) students said that Google Site lacks some functionalities offered by other internet applications. Thus, it will be suggested that teachers who may want to use this platform may include and attach to the teacher’s made Google Sites some interactive learning links, learning games, and other activities that can challenge the students. Comparing the frequencies of the responses based on the themes derived, it was revealed that the advantages of using the Google site are more evident than its disadvantages as evidenced by a difference of 15 responses.

The result of the Paired sample t-test reveals that there is a significant difference on the knowledge students before (M = 10.1 SD = 1.68) and after (M= 13.3, SD = 2.13) implementing Maximum Utilization of Google Sites, t (24) =7.22, p < .001. The effect size for this analysis (Cohen’s d =1.44) was found to exceed Ref. [6] convention for a large effect (d = .80). The finding indicates that intervention leads to a significant gain in knowledge on the ecosystem. Thus, continuous implementation was recommended to further improve the knowledge of acquisition of students on other topics in English for Academic and Professional Purposes.

4. CONCLUSION

Based on the results and findings of the pretest, posttest, survey, and interview, on the utilization of Google Sites in teaching English for Academic and Professional Purposes, the researcher finally concludes and implies that the utilization of Google Sites was an effective intervention and effective learning platform during this time of distance learning provided with evidence on the effectiveness of the intervention in prompting students’ engagement, independent learning, convenience, time management, submission of outputs, improved students’ learning, and students’ positive perception and good experience in using the teacher-made google site.

The researcher believed that this intervention will be implemented in wider scope as it is proven to be effective. The recommendations are identified. Schools will adopt and implement this platform not only in English for Academic and
Professional Purposes subject but with wider scope as it is proven to help students boost their engagement, and independent learning allows taking time in understanding the lesson, and easy access to learning materials. Students' friendly as its free platform, and can be accessed anytime, anywhere even in a lower Mbps. Schools conduct learning action cell sessions about the use of Google Sites in teaching and conduct training on how to create a teacher-made learning website as it helps teachers to be more productive. It is paperless which promotes sustainability and is eco-friendly which helps save school funds for printing modules and worksheets. Future teacher-made, Google Site as an e-Learning platform may include and attached more interactive learning links such as learning games, Quizizz, Quizlet, Kahoot, and other learning activities that can challenge the students.
